RESEARCH INTERESTS

My research aims at understanding social judgments and social behavior through their underlying mental processes. A central question of my research concerns the mental underpinnings and behavioral consequences of spontaneous and deliberate responses to objects, individuals, groups, and social issues. Previous and ongoing projects include studies on attitude formation and change, context effects on evaluative responses, evaluative conditioning, cognitive consistency, prejudice and stereotyping, impression formation, decision-making, attribution, self-representation, and moral judgment. Several recent projects also investigate the role of spontaneous and deliberate evaluations in various applied contexts, including political decision-making, consumer behavior, affective disorders, and legal decision-making. In addition to these major lines of research, I am interested in basic questions of psychological measurement and meta-theoretical issues in the construction and evaluation of psychological theories.
